

MindOps

Enterprise AIOps Intelligence Platform

Actionable Recommendations

- Critical** Anomaly Detection
 - Validate health and resource usage on **svc-fund-transfer** (CPU, memory, connection saturation).
 - Check application logs for errors or exceptions correlated with the anomaly timestamps.
- High** Short-Term Mitigation
 - Monitor recovery progress on all 1 affected entities after root cause is addressed.
- Medium** Long-Term Architecture
 - Review dependency graph to reduce coupling and single points of failure.
 - Add automated health checks and self-healing capabilities for this entity.

Root Cause Narrative

svc-fund-transfer

The RCA engine identified **svc-fund-transfer** as the primary root cause with **65% confidence** and a blast radius of **3 entities**. Highlighted by a critical error rate of **40%** (baseline 1%, z-score 48.8)

WHY THIS ENTITY?

- Topology Position**
3 downstream entities depend on this node — highest blast radius in the graph
- Event Density**
1 anomaly events detected on this entity in the analysis window — the highest concentration
- Topology position**
Anomalies on this entity precede downstream service degradation, indicating causal direction

Operational Efficiency

Cuts resolution time by 50% with instant anomaly alerts and rapid Root Cause Analysis

Business Impact

Achieves 100% audit compliance and 90% noise reduction, restoring focus and confidence.

Trusted Data Security

All processing remains on-premise or hybrid with no external data transfer

Transform Your IT Operations MindOps is a next-generation AIOps platform that transforms enterprise IT operations with precise **anomaly detection**, **causal root cause analysis**, and **unified problem correlation**. Operating entirely inside your private network, it delivers real-time insights that accelerate recovery, strengthen reliability, and safeguard sensitive data.

Uncompromising Control and Compliance

MindOps is built to run securely within your organization's perimeter, offering deployment options across on-premise, hybrid, or fully air-gapped environments for maximum compliance and resilience.

Security & Compliance

Meets SOC2 and ISO27001 standards with TLS encryption, RBAC, and audit logging, ensuring secure communication.

Oversight & Accountability

Ensures complete traceability with incident timelines, causal graphs, and audit logs for compliance monitoring.

Data-Driven Decision Making

Provides actionable insights with real time dashboard that highlight MTTR trends, incident patterns, and SLO performance.

Scalable Deployment

Handling up to 10M events per second, 10,000 services, and unlimited concurrent users with consistent reliability.

Flexible Plans for Every Organization

MindOps provides scalable feature sets available in Essential, Premium, and Enterprise tiers. Each plan can be enhanced with add-on services such as GPU infrastructure, extended data retention, compliance certification support, or 24/7 assistance.
